

Weiye Wang

E-Mail: wweiyiwang@gmail.com

TEL: + 86 18280073760; + 44 07344698212

EDUCATION

University College London (UCL)

2025.09 – 2026.09 (expected)

MArch Architectural Design (RC2 – Soft Robotic Architecture)

Xi'an Jiaotong-Liverpool University & University of Liverpool

2021.09-2025.06

BEng Architecture (Dual Degree)

- Upper Second Class
- University Academic Excellence Award (Top 5%), 2022–2024

RESEARCH INTEREST

Posthuman architectural theory; critical studies of technology and space; interdisciplinary research bridging architectural theory, humanities, and technological innovation.

PUBLICATIONS & CONFERENCES

Wang, W. et al. (2024) Modular lunar village concept design for long-term habitation located in lava tube, p. 573.

Available at: <https://doi.org/10.52202/078382-0056>.

RESEARCH EXPERIENCES

Summer Undergraduate Research Fellowship Project

Modular Moon Village Concept Design for Long-term Habitation Located in Lava Tube

2024.06-2024.10

Research member

- Conducted a systematic literature review on architectural and energy strategies for extreme extraterrestrial environments.
- Developed a design-research framework translating environmental constraints into spatial systems.
- Produced analytical drawings and parametric models to support research hypotheses.

Research Outcomes:

- Published paper in the 75th International Astronautical Congress (IAC 2024)
- Project presented at the International Conference on Space Habitation and Exploitation 2024
- Second prize for the Australian Space Architecture Challenge 2025

Summer Undergraduate Research Fellowship Project

Education-led Urban Regeneration

2023.06-2023.09

Research member

- Reviewed and categorised literature on spatial boundaries between educational institutions and urban contexts.
- Conducted fieldwork including interviews and observational recording; analysed qualitative data and developed visual representations.
- Proposed spatial strategies informed by empirical findings.

Research Outcomes:

- The results of the research and design were further developed and won the Tiantan Academy Award

Summer Research Project (External Supervisor)

Shanghai Jiao Tong University – 3D Printing Systems and Digital Medical Technologies

2025.06-2025.08

Research member

- Reviewed literature on additive manufacturing and soft robotic systems, focusing on material behaviour and fabrication-driven adaptability.
- Conducted qualitative research on the accessibility of digital medical technologies in Southwest China.
- Contributed to the conceptual development of 3D printing equipment, developing an interest in soft, adaptive fabrication systems and their architectural implications.

SKILLS

- Design & Modelling: Rhino, Grasshopper, Blender
- Computational & Interactive Systems: ROS, Unity, Arduino-based prototyping, AR development (8th Wall)
- Research Methods: Literature Review, Qualitative Analysis, Fieldwork, Data Visualisation
- Language: IELTS 7.0
